Enhancing Pneumococcal Vaccination Rates through Community Pharmacist Involvement

The goal of this study was to increase pneumococcal vaccination rates among high-risk adults by utilizing community pharmacists to (1) advise patients about pneumococcal disease and (2) administer the vaccine. More specifically, the study evaluated the effectiveness of an integrative pro-active pneumococcal immunization program delivered by community pharmacists.

A Retrospective Analysis of Community Pharmacists' Recommendations in the North Carolina Medicaid Medication Therapy Management Program

The goal of this study was to determine the economic impact of cost-saving alternatives for the North Carolina Medicaid Medication Therapy Management Program. It also assessed the acceptance of recommendations made by pharmacists to physicians and the implementation of the accepted recommendations.
