### Education

1998-2002	B.S., Biochemistry	University of Michigan
2003-2006	M.Eng., Pharmaceutical Engineering	University of Michigan

I am a part-time graduate student at UNC and work full-time at GlaxoSmithKline in nearby Research Triangle Park as a pharmaceutical product development scientist. At UNC, I am in my third year of graduate studies and my research project involves the development of an orally administered prodrug of DTPA as a radionuclide decorporation agent. At GSK, my role is to develop formulations and manufacturing processes to deliver drug products for use in clinical trials and, eventually, commercialization. To balance my time between work and school, I typically work at GSK during regular business hours and spend my evenings and weekends on campus to conduct my graduate research. Managing work and school has been a very difficult challenge, but I feel that this situation allows me to get the best of both academic training and industrial experience.
